

CLIENT MEMO

Date: November 18, 2016

Dear Valued Clients,

Due to a widespread commercial shortage of a key reagent, we are unable to provide testing of orotidine in the following test:

- Orotic Acid/Orotidine Determination (TC 4210)

Therefore, effective December 13, this test will include quantitative analysis of orotic acid only. We will notify you as soon as the reagent is available and we can begin testing for orotidine again.

Please direct any questions to 1-800-411-GENE or email us at geneticstest@bmgl.com. Please visit our website at www.BMGL.com for additional information on our test offerings.

Sincerely,

Alan Pourpak, PhD, MBA
Director, Product Development and Strategy
